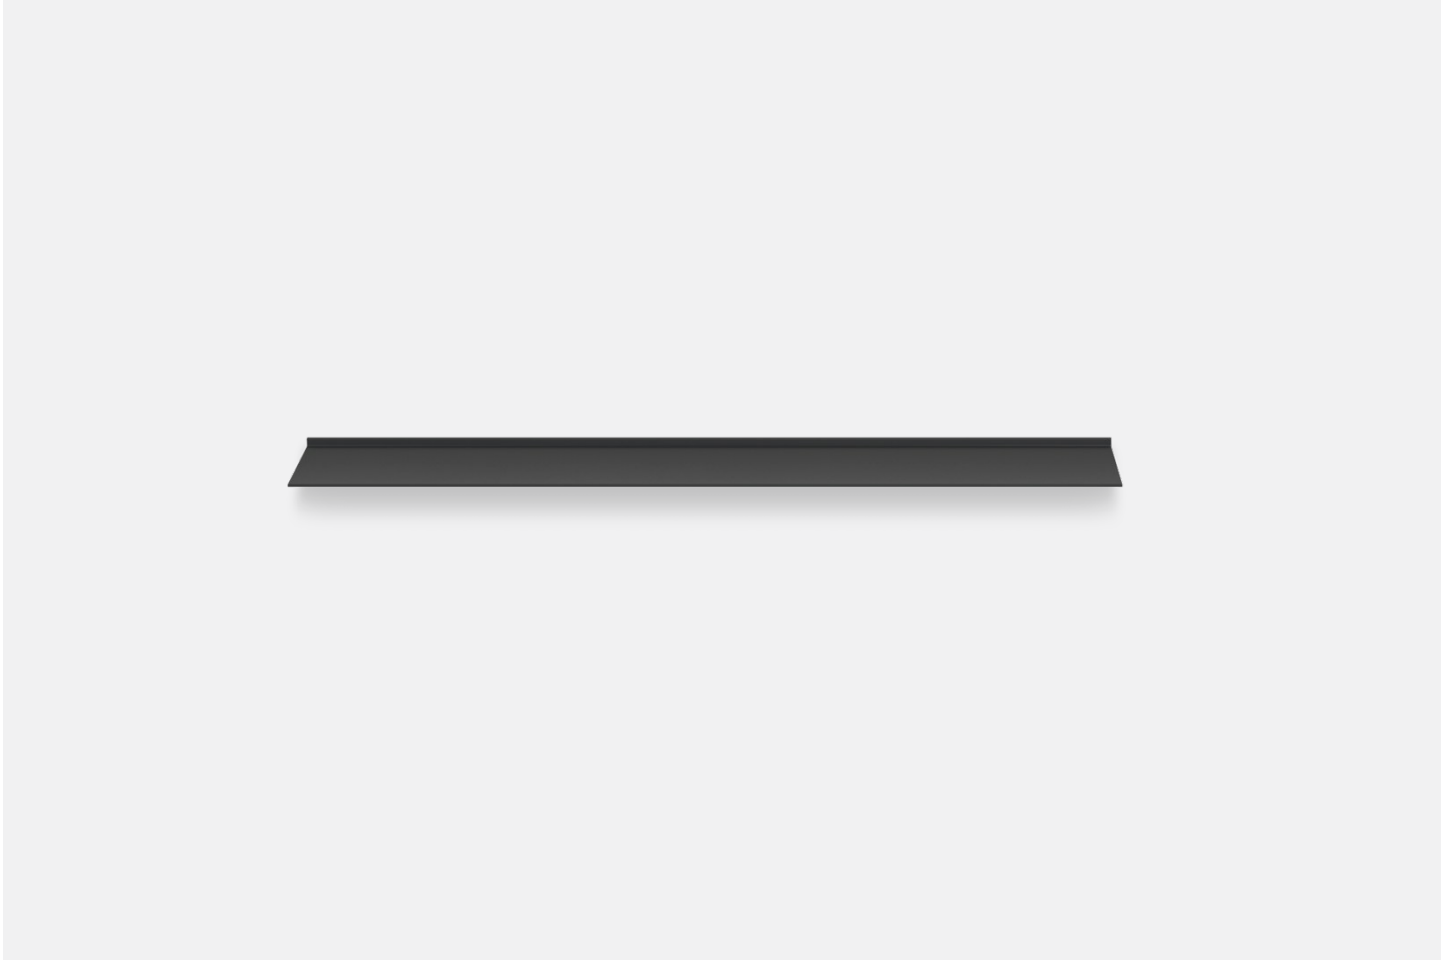
Hang

Claudio Caramel, 2008

Technological, modular, and accessorized, Hang transforms the shelf into an open and dynamic system. Its extruded aluminum structure combines lightness with solidity, allowing the creation of endless compositions along the wall or the arrangement of independent modules, always balanced and functional. A contemporary design that blends style and organization with flexibility and precision.



Hang

Shelving system of extruded aluminium, provided with two characteristic slots (one on the upper and one on the under side) allowing the free positioning of the accessories. A regulation mechanism allows to obtain an exact 90° angle to the wall. Different configurations can be obtained without limits of length, by joining more pieces together.

Hang

depth 30 cm
shelves height 7 cm
width 80 - 120 - 160 - 200 cm
